

A NEW STANDARD FOR HYGIENE WITH THE DELABIE WASTE WITHOUT WATER LEVEL

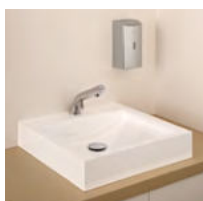

The hygienic waste with no water level

White version

Chrome-plated version

The hospital hygiene sector is constantly evolving. DELABIE is proud to present the latest innovation in this field: the hygienic water-free washbasin waste with membrane! No more worries about stagnant water and hygiene problems. Enter an era where cleanliness is simple to achieve.

Hygiene for tomorrow

DELABIE's water-free hygienic waste is revolutionising traditional standards by removing the constraints of conventional wastes. Typically, they create an environment conducive to bacterial development by retaining stagnant water which also leads to unpleasant smells. In addition, they frequently become clogged with debris and residue, requiring regular unblocking. By way of contrast, the design of the water-free hygienic waste features an ingenious membrane that prevents any unpleasant smells rising back up. There is no accumulation of water, ensuring impeccable hygiene every time it is used.

Easy to maintain: a major asset

The simplicity of cleaning offered by this water-free waste demonstrates DELABIE's commitment to hygiene. The chore of cleaning the waste is no more! The clever design of this hygienic water-free waste incorporates a smooth interior, with nowhere for hair and other residue to adhere.

Maintenance is very simple, with none of the disadvantages of traditional wastes. And, unlike conventional wastes, there is no longer any need to dismantle the water level. Simply remove the dome to access the waste and clean it easily with a brush, ensuring a clean and fully functional waste.

Simple to disassemble, easy to service

Made from silicone, the water-free waste's membrane is not only easy to clean and replace, but it also has exceptional durability over time. This significantly reduces long-term maintenance costs.

In addition, the design of this waste, with no standing water, removes the need for complex disassembly. Indeed, since the dome and membrane can be removed easily, the waste is very easy to service. The simplicity of access and handling saves valuable time, freeing up resources for other important tasks.

A waste that meets your expectations

DELABIE's water-free hygienic waste can be cut to size to fit any type of sink. It connects directly to the pipework, avoiding the bulk of a siphon waste, and freeing up precious space under the sink, especially for wheelchair users.

Complying with the European standard EN 274, it has an evacuation flow rate of 36 lpm, guaranteeing maximum water drainage efficiency while respecting the most rigorous requirements in terms of hygiene and quality.

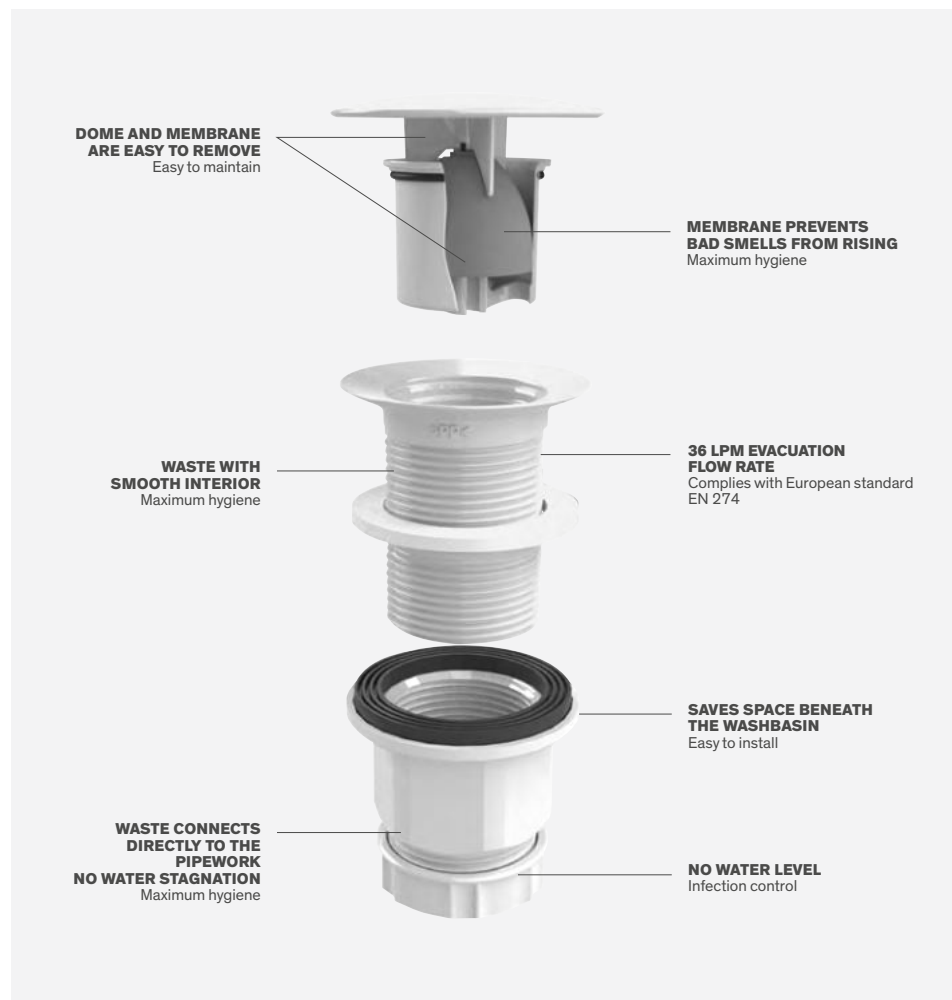

Sleek design, guaranteed harmony

It is difficult to imagine how much innovation there is behind the sleek design. The aesthetics of DELABIE's waste match any type of washbasin without an overflow, bringing a touch of modernity to your installation. Available in two finishes, white or chrome-plated, this waste creates design harmony.

PRODUCT BRIEF / HYGIENIC WASTE WITHOUT WATER LEVEL

DELABIE's water-free waste has revolutionised washroom hygiene by eliminating the disadvantages of conventional wastes. Thanks to its design and its innovative membrane, it prevents bad smells and blockages, guaranteeing impeccable hygiene. It is easy to maintain and its durability make it a practical and effective solution, with a modern design that is suitable for any washbasin without an overflow. 30-year warranty.
